Github: github.com/alim-reza LinkedIn: linkedin.com/in/alim-ahmed-reza-asif

Senior Full-stack Software Engineer with 7+ years building scalable fintech and enterprise platforms. Strong in backend development, microservices, AI-assisted development, cloud-native architecture, and product engineering. Equally comfortable owning backend, frontend, DevOps, and AI-assisted engineering workflows.

TECHNICAL EXPERTISE

- **Languages:** Java, JavaScript (ES6+), SQL, Python
- **Frameworks & Libraries:** Spring Boot, Angular, Next.js, React, Fast API
- **Cloud & DevOps:** Jenkins, CI/CD, Git, Linux Server, AWS, Docker
- **Data & Messaging:** PostgreSQL, MariaDB, Oracle, MongoDB, Redis, Apache Kafka
- **Architecture & Methodologies:** Microservices, Event-Driven Architecture, CQRS, RESTful APIs, SOLID Principles, Design Patterns, TDD, Agile/Scrum (Jira)
- **AI Engineering:** Spec Driven Development, Review Driven development, RAG, MCP, Skills/Rules Configuration
- **AI Tooling:** Cursor, Claude Code

WORK EXPERIENCE

Senior Software Engineer

April 2022 - Present

Kona Software Lab

Dhaka, Bangladesh

- Architected and designed an end-to-end Approval Management System with **configurable workflows** and seamless analytics integration.
- Designed and implemented a fully **configuration-driven multi-tenant** platform with **tenant isolation**, enabling customer-specific roles, permissions, menus, policies, and service onboarding without code changes.
- Built **configurable RBAC and dynamic menu management**, allowing each tenant to independently manage users, roles, permissions, and product access.
- Established AI-assisted engineering workflows using Cursor and Claude Code by developing **reusable Skills and Rule** Files for project-specific code generation, refactoring, testing, and code review.
- Built AI governance rule sets covering **ISO guidelines, PCI DSS requirements**, coding standards, and project-specific architectural conventions, improving consistency and quality during AI-assisted development.
- Used the **ELK Stack** (Elasticsearch, Logstash, Kibana) to monitor production systems, analyze application logs, investigate incidents, identify bottlenecks, and validate configuration changes for improved system reliability.
- Built reusable core libraries adopted across multiple projects, **reducing project bootstrap time from scratch to POC by ~50%**, eliminating duplication and increasing engineering velocity.
- Delivered features end-to-end across backend and frontend, **cutting feature delivery lead time from discussion to production by ~50%**, improving team throughput and execution speed.
- Designed scalable fee and limit policy engines for payment transactions, **enabling configuration changes without redeployment and reducing rollout time from days to minutes**.
- Increased test coverage for legacy services to **~95%**, **reducing production regressions by ~50%** and enabling safe feature extension.
- Migrated a JavaScript-based React application to **TypeScript + Next.js**, **improving page load performance by ~60% and reducing runtime errors**, while enhancing maintainability.

- Reduced notification system latency through architectural and performance optimizations, **cutting message delivery time by ~40%** and improving user experience.
- Scaffolded and developed a cross-platform mobile application using Flutter, **achieving ~85% code reuse across Android and iOS**, accelerating feature parity and delivery.

Specialist (Software Developer)

July 2021 – April 2022

RedDot Digital Limited

Dhaka, Bangladesh

- Patched **Log4Shell vulnerabilities** across 8 microservices within 24 hours, **eliminating critical security exposure**.
- Coordinated cross-team collaboration between Nagad, bKash, and Robi engineering teams during a high-traffic campaign, **maintaining 99.9%+ service uptime**.
- Implemented a payment gateway UI optimized for minimal bundle size, **reducing load time by ~40%**.

Software Engineer

May 2019 – July 2021

CoKreates Limited

Dhaka, Bangladesh

- Developed multiple backend microservices and frontend features end-to-end for a government-scale ERP, **reducing overall feature delivery time by ~50%**.
- Implemented automated CI/CD pipelines using Jenkins, **cutting deployment time by ~70% and reducing manual release errors**, improving release reliability.
- Developed Linux-based internal services and tooling, **reducing developer environment setup time from days to hours**, increasing team productivity.

PROJECTS

- **CMS — Card Management System (Full-stack)**
Built a high-performance, secure, distributed microservices platform for financial transactions and card management, implementing resilient fallbacks to ensure high throughput and minimal downtime.
- **GRP — Government ERP (Full-stack)**
Piloted a comprehensive ERP solution at the Ministry of Planning, covering inventory, asset, budgeting, and audit modules; streamlined administrative workflows and reduced manual processing across departments.
- **Kona Token Trade (Frontend & App)**
Implemented a cryptocurrency and NFT trading platform with multilateral trading support, enhancing user transaction efficiency and providing real-time asset tracking.
- **Altair (Full-stack)**
Led a team of 4 to build a 3D asset marketplace supporting upload, download, and model type conversion; improved talent discovery and platform usability for creators and clients.

EDUCATION

- **North South University** 2025 - Present
Computer Science & Software Engineering, MSc
- **American International University - Bangladesh (AIUB)** 2016 - 2019
Computer Science & Software Engineering, BSc
